Summary

Skills

Frontend : React, Next.js, Tailwind, Material UI

Backend : Express, PostgreSQL, Mysql, Laravel

Deployment :Vercel,

Tools : Figma, Git

Programming Language : JavaScript, TypeScript

Education - Formal

Yogyakarta

Sept 2020 - Desember 2025

- Informatic bachelor of Indonesian Islamic University
- CGPA : 3.17

Experiences

Jan 2025 - Maret 2025

DPRD DIY | Web Administrator

- Managed and maintained the official DPRD DIY website, ensuring uptime, content accuracy, and timely publication of updates
- Monitored website security and performed routine backups to safeguard institutional data and public information
- Coordinated with internal staff to upload and update public documents, announcements, and legislative agendas
- Conducted regular content audits and minor UI fixes to improve site performance and accessibility

Oct 2021 - April 2022

Informatics Student Association | research and development in medical field

- Conducted comprehensive research and data analysis to evaluate organizational programs and assess member needs.
- Formulated and proposed innovative strategies and initiatives to enhance organizational development and operational efficiency.
- Collaborated with cross-functional teams to implement evidence-based improvements and technological solutions.
- Developed strong analytical, critical thinking, and problem-solving skills through active involvement in research activities

Projects

Dispetaru DIY | Front end developer

- Spearheaded the UI redesign of the Dispetaru DIY public portal, significantly improving navigability and overall user experience
- Enhanced codebase scalability and maintainability by applying Separation of Concerns (strictly isolating CSS from JS).
- Optimized UX by implementing smooth scrolling, sticky headers, interactive feedback, and responsive mobile navigation
- Developed a real-time, reload-free search feature, delivering a seamless Single Page Application (SPA) experience

Nadi | Full-Stack Developer

- Engineered an enterprise-grade HR and performance management system using Next.js, TypeScript, and Tailwind CSS.
- Developed an interactive drag-and-drop Kanban board with optimistic UI updates for seamless, real-time task tracking.
- Enforced strict Role-Based Access Control (RBAC) via NextAuth.js to securely isolate Executive, HR, and Employee data.
- Integrated automated reporting, enabling dynamic CSV exports of complex payroll and attendance records.

PasalPintar.id | Full-Stack Developer

- Engineered an AI-powered legal assistant web application using Next.js, TypeScript, and Tailwind CSS
- Implemented an Advanced RAG (Retrieval-Augmented Generation) architecture utilizing Vercel AI SDK and Google Gemini models
- Integrated the pasal.id REST API to retrieve real-time Indonesian legal documents, ensuring factual and hallucination-free AI responses
- Designed a multi-step AI pipeline featuring query reformulation and post-retrieval filtering (LLM-as-a-Judge) for precise legal reasoning

Sivitas | Full-Stack Developer

- Engineered a comprehensive Village Information System (SIVITAS) web application utilizing Next.js, TypeScript, and Tailwind CSS to digitize and streamline rural administrative services
- Architected a robust backend infrastructure by integrating Prisma ORM and configuring a scalable, cloud-based PostgreSQL database via Supabase
- Implemented dynamic, server-side rendered (SSR) routing and real-time search functionalities to serve up-to-date public information and community news
- Designed a relational database schema to manage user authentication, citizen registries, public complaints (Aduan), and document requests (Surat), seamlessly deployed on Vercel using Serverless Functions
